Question 2

The programs eigen-1.cpp and eigen-2.cpp implement the two different multiplication cases that are mentioned in the question.

The valgrind output files for the respective cases are saved as cachegrind.out.case1 and cachegrind.out.case2 respectively.

The end results after the valgrind execution are saved in results-case1.txt and results-case2.txt for the two cases.

All codes and output files are included in the directory.
